Dep. de Engenharia Informática – ISEP

2026/2027

Project Concern 1: Modeling Requirements

- Replicate the light switch requirements modeling example in your repository
- Extend the requirements Metamodel and DSL to add support for:
  - status (e.g., Draft, Under Review, Approved, Rejected)
  - priority (e.g., High, Medium, Low, Critical)
  - verificationMethod (e.g., Analysis, Demonstration, Inspection, Test)
  - risk (e.g., High, Medium, Low)
  - type (e.g., Functional, Performace, Safety, etc.)
  - the author of the requirement
- Also update the Metamodel and DSL to add support for new concepts to support the modeling of Hazards and Risks and how Hazards can lead to Risks that can be mitigated by Requirements.
  - For instance, in the light switch case, there may be a hazard of a power failure that leads to the risk of low visibility that could be mitigated by a requirement stating that the system should include emergency lights running on battery
- Commit/push the new projects into the repository
- Model the requirements of your problem using the new, extended DSL and commit/push to the repository
- Add the technical documentaion to the repository (add images illustrating your models)
