Project Concern 2: Modeling Use Cases

- Replicate the light switch use modeling example in your repository
- Extend the use case Metamodel and DSL to add support for:
  - the **refine** reference to **Requirement** of the requirements metamodel only supports one reference; add support to several references
  - add a **description** attribute to the **UseCase** so that the modeler can describe the behaviour of the use cases;
  - **Actors** can be modeled but they are not represented in the diagram; add support for displaying actors in the diagram;
  - Add an optional boolean flag to the "UCModel" to turn on and off the display of **refine** relationships in the use case diagrams
- Add support for modeling interactions between actors and use cases;
- Commit/push the new projects into the repository
- Model the use cases of your problem using the new, extended DSL and commit/push to the repository
- Add the technical documentaion to the repository (add images illustrating your models and metamodels)

See next slide for an example illustration

Project Concern 2: Modeling Use Cases, Illustration

It should be possible to produce a diagram like the following
